

**IN THE ABSTRACT:**

The Abstract as amended below with a replacement Abstract shows added text with underlining and deleted text with ~~strikethrough~~.

Please AMEND the Abstract in accordance with the following:

A distributed voice ~~browsing~~ browser where control of a call is switched between a communication carrier system or portal and a remote application server in accordance recognition of an input corresponding to an augmenting grammar set via the remote application server. When a caller requests access to a remote application server, a portal transfers an augmenting grammar set to the remote application server. The remote application server is connected to the caller and recognizes inputs by the caller. When an input is received which corresponds to the augmenting grammar set, the remote application server notifies the portal.
